Blu**Cem** LH60

ALICE SPRINGS HV POWER DISTRIBUTION

A power authority has invested in upgrading the power distribution network in Alice Springs. Recent installation of an under-bore beneath the rail line at Kennett Court included five conduits for housing of HV cables.

PROJECT COMPLETION: SEPTEMBER 2015 CONTRACTOR: SITZLER BROS

APPLICATION

WHERE BLUCEM LH60 WAS USED

The grout was placed in the DN450 under-bore up to 48 m long to encapsulate the HV cable conduits and provide long-term structural integrity under the railway line.

WHY BLUCEM LH60 WAS USED

The electrical design demanded that cement based backfill around the PVC cable conduits had a low thermal resistivity and low exothermic heat to avoid temperature damage to the conduits during curing. Additionally, a requirement in under-bores for high fluidity, low bleed, non shrink and high compressive strength grout influenced the asset owners to approve Blu**Cem** LH60. The grout was supplied in 1200kg bulk bags to allow batching in agitator trucks and pumping through a conventional concrete pump.

FEATURES

- Very low thermal resistivity
- Low exothermic heat
- Low bleed, high fluidity and self leveling
- High compressive strength
- Non shrink characteristics

BENEFITS

- Batching in agitators allowed continuous and efficient grout delivery
- Designers obtained excellent thermal transfer/superior cable ratings
- Eliminated the risk of heat damage to PVC conduits
- Ensured completed filling of under-bore /encapsulation of conduits
- Provided structural integrity

SUMMARY

The contractor and the asset owner were very happy with the performance of the Blu**Cem** LH60, which allowed the backfilling of the under-bore within expected construction time frames and with all of the desired technical outcomes.
